Claim Amendment

1-25 (canceled)

26 (new) A portable cleaning device, comprising:

a brush portion including

a telescopic portion comprising at least one of a plurality of telescopic sections;

a cleaning brush coupled with said telescopic portion of said portable cleaning device;

a handle portion comprising

a power supply located in said handle portion of said portable cleaning device, wherein said power supply includes an axle, and wherein said power supply provides a rotation of said axle which is connected to said telescopic portion;

a handle means including at least one front wall which includes an aperture intended for unobstructed passage of said axle or said telescopic portion of said portable cleaning device;

a switching means coupled with said power supply, and wherein said switching means is intended to control said power supply of said portable cleaning device.

27. (new) The device of claim 26, wherein said handle portion further comprises a hanging means and/or a stand intended for holding and convenient storage of said portable cleaning device.

28. (new) The device of claim 26, wherein said power supply is electrical and comprises

an electrical motor electrically coupled with said switching means of said portable cleaning device, and wherein said electrical motor includes said axle;

an electrical power supply located in a power supply compartment of said handle means of said handle portion, and wherein said electrical motor is installed in at least one of a plurality of holders located in said handle means.

29. (new) The device of claim 28, wherein said axle is further connected to a telescopic portion of said portable cleaning device through a connection means, and wherein a handle means of said portable cleaning device includes at least one front wall which comprises an aperture intended for unobstructed passage of said telescopic portion or said axle or said connection means.

30. (new) The device of claim 28, wherein said electrical motor of said portable cleaning device is further a reversible electrical motor.

31. (new) The device of claim 28, wherein said handle portion further comprises a hanging means and/or a stand intended for holding and convenient storage of said portable cleaning device, and/or charging of said electrical power supply.

32. (new) The device of claim 28, wherein said electrical power supply is at least one of a plurality of electrical batteries inserted in a power supply compartment and intended to power said elec-

trical motor, and wherein said electrical power supply is appropriately electrically connected to said electrical motor by electrical contacts and electrical wires through said switching means of said handle means of said handle portion of said portable cleaning device.

33. (new) The device of claim 32, wherein at least one of said electrical contacts connecting said electrical power supply is further presented by a sprang electrical contact.

34. The device of claim 32, wherein said handle means of said portable cleaning device is further dissectionable to provide a replacement of said electrical power supply in said handle portion or further comprises a covered opening to provide a replacement of said electrical power supply in said handle portion or further comprises a detachable lid to provide a replacement of said electrical power supply in said handle portion.

35. (new) The device of claim 26, wherein said power supply is further mechanical and comprises a mechanical means including

a handle comprising a shaft rigidly coupled by one end with said handle and by another end with said axle, and wherein said handle is mounted on a back wall of said handle means of said handle portion of said portable cleaning device;

a second aperture located into said back wall and providing an unobstructed passage of said shaft of said handle into said handle means;

a spring located in said handle means and mechanically connected to said axle;

a mechanical switching means mechanically coupled with said axle.

36. (new) The device of claim 35, wherein said axle is further connected to a telescopic portion of said portable cleaning device through said mechanical switching means.

37. (new) The device of claim 35, wherein said axle is further connected to a telescopic portion of said portable cleaning device through a connection means, and wherein a handle means of said portable cleaning device includes at least one front wall which comprises an aperture intended for unobstructed passage of said telescopic portion or said axle or said connection means.

38. (new) The device of claim 35, wherein said handle portion further comprises a hanging means and/or a stand intended for holding and convenient storage of said portable cleaning device.
